

Data Storytelling & Statistical Validation

ApexPlanet Software Pvt. Ltd.
Data Analytics Internship
Prepared by: Vishnu Kumar Reddy

Project Objective

Analyze sales data, build an interactive dashboard, identify business insights, and validate findings using hypothesis testing.

Dataset Overview

The dataset contains Order ID, Product, Category, City, Gender, Quantity, and Total Sales.

Data Cleaning

Removed missing values, checked duplicates, corrected data types, and prepared an analysis-ready dataset.

Exploratory Data Analysis

Analyzed sales by category, top products, revenue by city, monthly sales trends, and gender distribution.

Interactive Dashboard

Created KPI cards, charts, and interactive filters (Category, City, Gender) using Looker Studio.

Key Business Insights

Compared category performance, identified top products, analyzed city-wise revenue, and observed monthly sales trends.

Hypothesis Testing

H0: No significant difference in average sales.
H1: Significant difference exists.
Method: Independent Two-Sample T-Test.

Conclusion

The project demonstrates end-to-end data analytics, visualization, dashboard development, and statistical validation.
